# **1 INFORMATIONS GÉNÉRALES À PROPOS DU SM-CLIENT R6.0.0:**

Dans cette version, l'accent a été mis sur la modernisation du code source. Cela a été possible par l'utilisation de Java 8 et du standard Java EE 7, un nouveau moteur de processus, ainsi que la modernisation des processus eux-mêmes avec la suppression de la quittance de protocole et du domaine eSchKG (e-LP). A cause de l'emploi de Java EE, Tomcat n'est plus supporté et est remplacé par TomEE+

## 2 NOUVEAUTÉS PRINCIPALES DE CETTE VERSION

1. nouveau moteur de processus avec Camunda au lieu de JBPM
2. emploi de Java 8 et Java EE 7 (Plus besoin d'un serveur JMS séparé, HornetQ n'est donc plus nécessaire)
3. suppression de la quittance de protocole
4. suppression du domaine eSchKG (e-LP)
5. nouveaux serveur d'applications supportés (TomEE+ et Weblogic)

## **3 LES CR ONT ÉTÉ IMPLÉMENTÉES DANS CETTE VERSION**
